Ultrasound Cavitation is a new technology based on many years of application of safe ultrasound practice in medicine.

Our cavitation has been specifically refined to target adipose fat cells. This treatment is great for men and women who wish to target/remove excess fat cells from the waist, stomach, arms, hips, thighs and buttocks that won't go away with diet and exercise alone.

Most clients see an immediate change in their appearance after the first session, with optimum results after 6-12 sessions.

RF technology offers a new scientific development in body sculpting and skin tightening. After the Ultrasound is complete we follow with an RF treatment, which starts the process of elimination and helps to tighten and firm lax skin.

speciality DERMAL TREATMENTS

Derma-Blading perfectly prepares the skin to receive greater product penetration so we can balance and improve your skin further following this service

Derma-Blading

Sometimes called Epi-Blading, Derma-Blading is a non-invasive dermal leveling treatment that utilises a specially designed surgical instrument to remove the top layers of dead skin cells (stratum corneum) and the 'Vellous hairs' (fluffy facial hairs), leaving you with a completely resurfaced and smooth complexion. The fine hairs are different from your thicker 'terminal hairs' so they will not grow back thicker or feel stubbly.

Benefits of this treatment are:

- makeup goes on smoother and doesn't catch hairs
- improves acne scarring
- improves fine lines and wrinkles
- removes fine Vellous hairs
- improves pigmentation
- improves Sun damage
- improves uneven skin texture
- great for sensitive skins that can't have Microdermabrasion.
